

Customer Journey Map

Date	25 June 2026
Team ID	
Project Name	Hydra Shield: An Intelligent Flood Prediction and Early Warning System (Rising Waters)
Maximum Marks	2 Marks

Customer Journey Map

Mapping out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions	Disaster Management Officer enters weather and environmental data into the system	System analyses the data using machine learning models and predicts flood risk	Officer receives the flood prediction and initiates early warning and response measures
Touchpoint	Flood Prediction Web Application (Flask-based interface)	Machine Learning Prediction Engine (Decision Tree, Random Forest, KNN, XG Boost)	Prediction Dashboard, Alert Notifications, Emergency Response System
Customer Thought	"I hope the system accurately analyses the current weather conditions."	"Is the prediction reliable enough to make emergency decisions?"	"Now we can warn the public and prepare rescue operations in time."
Customer Feeling	Hopeful, attentive	Curious, cautious	Confident, relieved, prepared
Process Ownership	Disaster Management Authority / Data Monitoring Team	Machine Learning Prediction Engine & System Administrator	Disaster Management Authority & Emergency Response Teams

Improvement Opportunities	Integrate real-time weather APIs and automatic data collection	Improve prediction accuracy with additional datasets and continuous model training	Add SMS/Email alerts, GIS-based flood maps, mobile application, and real-time notification services.
