

Data Flow Diagram

Date	26 June 2026
Team ID	
Project Name	Hydra Shield: An Intelligent Flood Prediction and Early Warning System (Rising Waters)
Maximum Marks	2 Marks

Data Flow Diagram

The Data Flow Diagram (DFD) illustrates how weather and environmental data flow through the Intelligent Flood Prediction and Early Warning System between external entities, system processes, and data stores to generate accurate flood risk predictions.

Symbol	Name	Description
Oval	External Entity	User (Disaster Management Authority / Government Officer / Public User) interacting with the system.
Numbered Rectangle	Process	Processes weather data and generates flood prediction using Machine Learning models.
Solid Rectangle	Data Store	Stores historical flood datasets, trained machine learning models, and prediction results.
Arrow	Data Flow	Represents the movement of weather data and prediction results between entities, processes, and data stores.

DFD - Credit Card Approval Prediction
