

Project Initialization and Planning Phase

Date	26 June 2026
Team ID	
Project Name	Hydra Shield: An Intelligent Flood Prediction and Early Warning System (Rising Waters)
Maximum Marks	3 Marks

Define Problem Statements:

The objective of this activity is to clearly identify the real-world challenges faced by stakeholders in flood management. By understanding the needs, limitations, and concerns of disaster management authorities and vulnerable communities, the team can design an intelligent flood prediction system that delivers timely, accurate, and actionable early warnings. This problem statement serves as the foundation for developing a machine learning solution that improves disaster preparedness, resource planning, and public safety.

Example:

I am	I 'm trying to	But	Because	Which makes me feel
Coordinator	Forecast	Delayed	Inaccuracy	Anxious

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Disaster Relief Coordinator responsible for emergency management.	Forecast flood risks and allocate resources efficiently.	Current predictions are often delayed.	Existing forecasting methods have limited accuracy and incomplete	Concerned about public safety and emergency preparedness.
