Project Name	Hydra Shield: An Intelligent Flood Prediction and Early Warning System (Rising Waters)
Maximum Marks	4 Marks

Empathy Map

This empathy map represents the perspective of a disaster management officer responsible for monitoring and responding to flood situations. It helps understand the officer's needs, concerns, actions, and emotions so that the machine learning-based flood prediction system can provide accurate early warnings, support timely decision-making, and improve disaster preparedness and response.

SAYS	THINKS
- We need accurate flood predictions before disasters occur. - Existing warning systems are often delayed or inaccurate. - We must protect people and reduce property damage.	- Can I trust the prediction generated by the system? - How can we evacuate people before flooding starts? - Will this system help us make faster emergency decisions?
PERSONA NAME Disaster Management Officer (Customer/User)	
DOES	FEELS
- Monitors weather and rainfall reports regularly. - Coordinates with emergency response and rescue teams. - Issues flood alerts and evacuation notices to the public.	- Concerned about public safety during heavy rainfall. - Stressed when weather conditions change rapidly. - Confident when reliable flood predictions support decision-making.
