Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Project Demo Planning

A well-structured demo plan ensures that the HydraShield – Intelligent Flood Prediction and Early Warning System is presented effectively by explaining the problem statement, demonstrating the machine learning model, and showcasing the Flask web application. The demonstration highlights the complete workflow from environmental data input to real-time flood prediction and early warning recommendations.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction	Introduce the project, objectives, and problem statement.	5 min	self
2	Dataset & Model Training	Explain dataset preprocessing, feature selection, machine learning algorithms (Decision Tree, Random Forest, KNN, XGBoost), and model selection.	7 min	self
3	Flask Web Application	Demonstrate the user interface, environmental data input form, and model integration.	10 min	self
4	Live Prediction	Show real-time flood prediction using sample environmental data and explain the prediction result.	10 min	self
5	Results & Performance	Present model accuracy, evaluation metrics, confusion matrix, and algorithm comparison.	8 min	self
6	Conclusion & Future Scope	Summarize the project, discuss benefits, limitations, future enhancements, and answer questions.	5 min	self

Demo Flow Summary

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the importance of early flood prediction and disaster preparedness.
2	Solution Overview	Describe the dataset, preprocessing techniques, machine learning models, and Flask application architecture.
3	Live Feature Demonstration	Enter environmental parameters, generate the flood prediction, and explain the prediction result along with safety recommendations.
4	Q&A Session	Discuss model performance, evaluation metrics, future enhancements, and answer questions from the evaluator.
